

Programming the PLM Shahara

Author: Jarvis Hill

Date: 26-MAR-2023

Purpose: Use this document to perform ISP programming on the PLM Shahara

1. Navigate to the following website,
<https://www.microchip.com/en-us/development-tools-tools-and-software/avr-and-sam-downloads-archive>

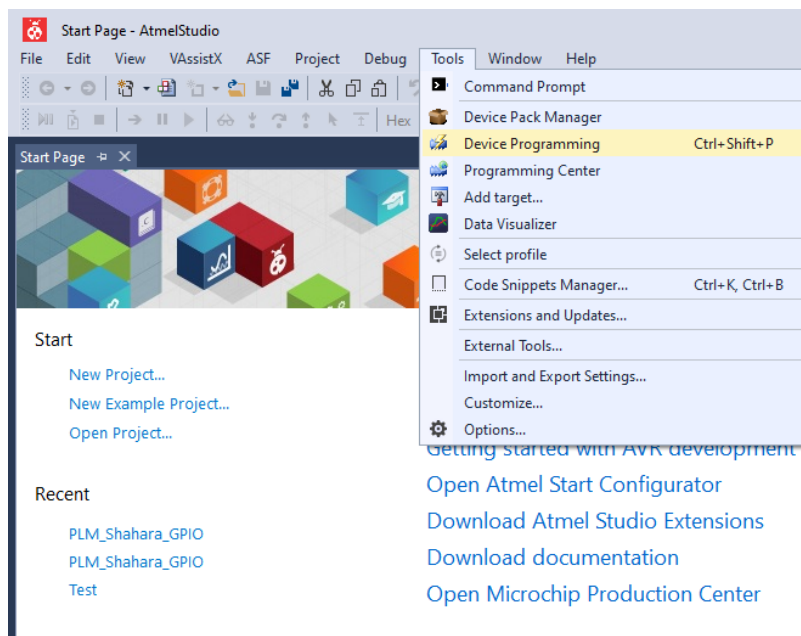

2. Download and install Atmel Studio 7 on your PC by clicking the link circled below,
Atmel Studio 7 IDE Archives

Web Installer (recommended)	Offline Installer	Release Notes/Readme
Atmel Studio v7.0.2389	Atmel Studio v7.0.2389	Atmel Studio v7.0.2389

3. Connect the programmer to the PC using the appropriate USB cable.
4. Open/launch the Atmel Studio software on the PC,

5. Once the application opens, navigate to Tools -> Device Programming

6. The Device Programming pop-up window will open. Select the following,
 - a. Use the **Tool** pull-down to select the programmer you plugged into the PC at step 3.
 - b. Use the **Device** pull-down to select “ATmega328P” MCU as the target.
 - c. Use the ISP pull-down to select “ISP”

Device Programming

Tool	Device	Interface	Device signature	Target Voltage
JTAGICE mkII	ATmega328P	ISP	not read	---
Apply			Read	Read

(Handwritten red letters A, B, and C are placed below the Tool, Device, and Interface dropdowns respectively.)

7. Click the **Apply** button.

JTAGICE mkII (00B00000340A) - Device Programming

Tool	Device	Interface	Device signature	Target Voltage
JTAGICE mkII	ATmega328P	ISP	---	---
Apply			Read	Read

(The Apply button is circled in blue.)

Interface settings

ISP Clock: 125 kHz

Reset to default clock

The ISP Clock frequency must be lower than 1/4 of frequency the device is operating on.

8. Connect the programmer's 6-pin connector to J2 on the PLM Shahara board **exactly** as shown below. Don't worry, if you connect the programmer backwards, it won't damage anything.

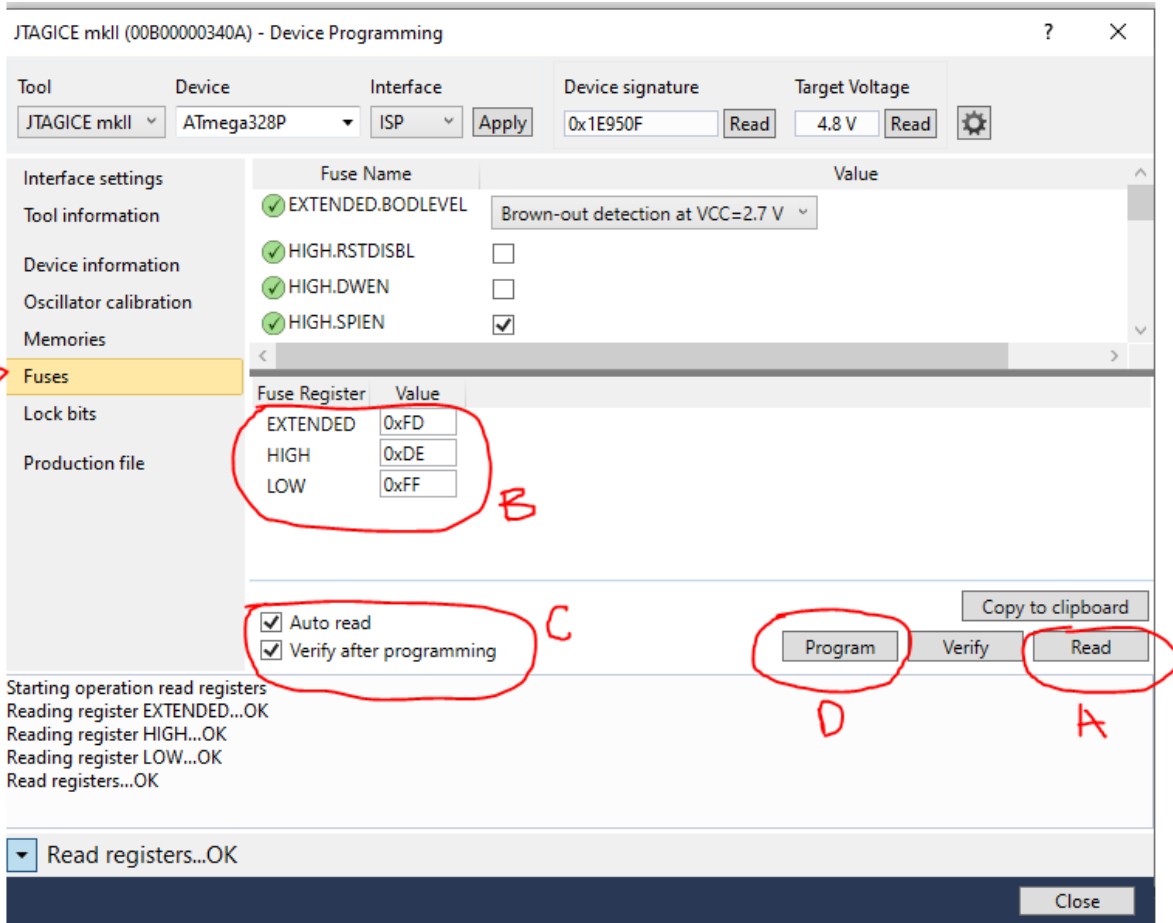

9. Power the PLM Shahara board by supplying 120 or 240VAC to the ACIN L1 and L2 screw terminals. The green light on the programmer should turn-on. If the LED does not come on, remove, rotate the programmer's header by 180 degrees and plug it back into the 6-pin header on the Shahara board.

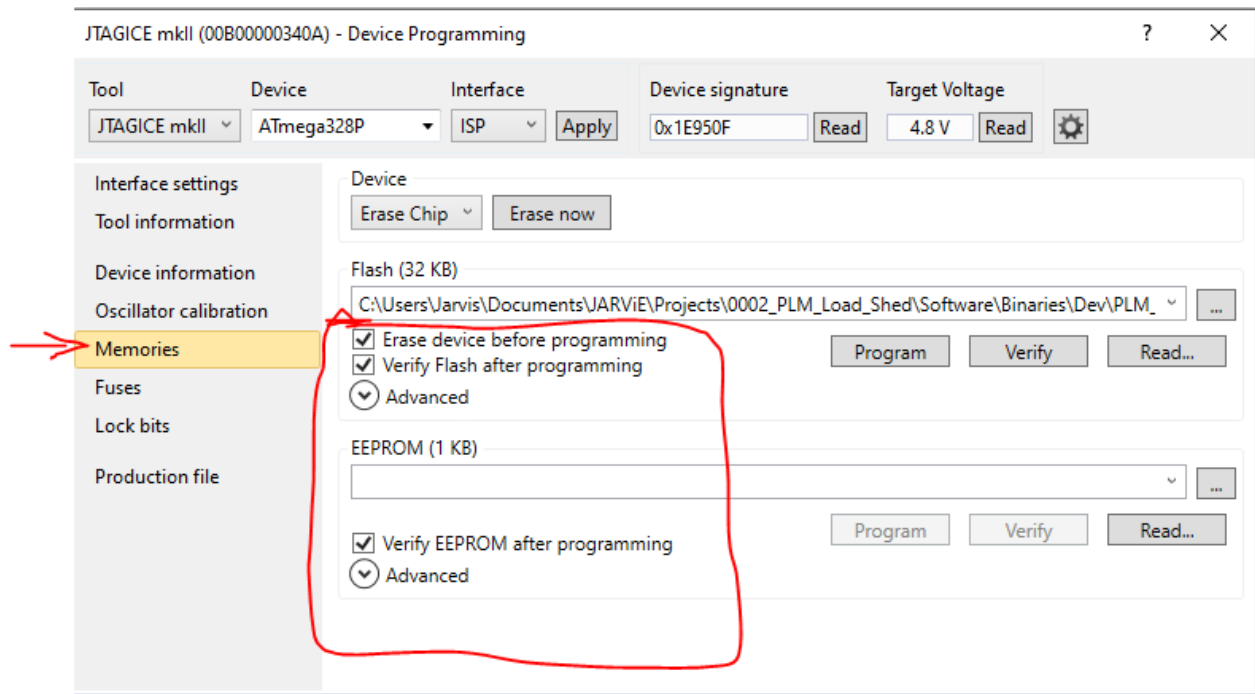

10. Click the **Read** button in the *Device Signature* Field. Verify the following,
 - a. A 4-digit HEX number populates in the *Device Signature* field
 - b. The *Target Voltage* is between 4.5V to 5V.
 - c. Device ID is read OK.

11. Navigate to the **Fuses** page. Ensure the CCA fuses are set correctly,
 - a. Click the **Read** button.
 - b. Verify that the **EXTENDED**, **HIGH** and **LOW** fuse registers read as shown. If not, update the registers with the values below.
 - c. Ensure the boxes are checked as shown.
 - d. IF the fuses registers were update, click the **Program** button

12. Navigate to the **Memories** page. Verify that the following boxes are checked.

13. Load the program to be placed on the PLM Shahara CCA,
- Click the button with the “...” in the *Flash (32 kB)* section
 - Select the .hex file to program onto the CCA
 - Double click the file to select it or click the file once to **highlight** it and then click the **Open** button in the file explorer window.

14. Upload the program to the PLM Shahara,
- Click the **Program** button to load the CCA with the selected firmware (.hex file)
 - Verify that the programming went OK.
